NOTIFICATION

This report has been mailed to all water and sewer customers of Stanly County Utilities and the Greater Badin Water and Sewer District. Additional copies are available at the Stanly County Utilities business office — 1000 North First Street, Suite 12, Albemarle, NC (704) 986-3686 or visit our web site.

Beware of the Grease Goblin

DID YOU KNOW...

Most sanitary sewer backups occur between your home and the sewer main?

You can help prevent a costly and unsanitary overflow by following a few simple steps.

Do

Scrape excess grease in a container and dispose of it in the garbage.

Don't

Pour grease, fats and oils from cooking down the drain.

**IT'S NEVER OK TO POUR
FAT, OIL OR GREASE DOWN
THE DRAIN!**

Greater Badin Water and Sewer District and Stanly County Utilities 2018 Wastewater Performance Report

Collections System

This brochure is designed to inform and educate consumers about the performance and operation of the Greater Badin Water and Sewer District (GBW&SD) wastewater collections system and treatment plant and the Stanly County Utilities (SCU) wastewater collections system and West Stanly treatment plant. If you would like more information about GBW&SD or SCU, please contact the Stanly County Utilities business office.

How the treatment process works

GBW&SD provides wastewater collection and treatment services to homes, businesses, schools and others to ensure and promote public health and sanitation in the Badin community. The system received and treated more than 318 million gallons of domestic, commercial and industrial wastewater from approximately 708 wastewater customers in the year 2018. This amounts to an average of 868,104 gallons of wastewater per day. Wastewater is collected in an 11 mile system of sewer pipes and transferred to the Greater Badin wastewater treatment plant by gravity flow and pumped from two lift stations throughout the district. The West Stanly wastewater treatment plant was purchased from the Town of Oakboro in May 2014. The system received and treated more than 213 million gallons of wastewater in 2018 from the collections system within Oakboro, Locust, Stanfield and Stanly County for an average of 584,888 gallons of wastewater per day. Once wastewater arrives at the treatment plants it is monitored, tested, treated and released back into the environment in a very clean state. Both plants are operated by well-trained, state certified operators who ensure the proper functioning of the facility, maintenance, and quality of the wastewater. The overall SCU collections system consists of approximately 32 miles of collection mains that includes service to the northern part of Stanly County; the County Airport region, the Town of Red Cross, the communities of Palestine, Millingport, Ridgecrest, Misenheimer and Aquadale. Wastewater from these areas is collected and sent to treatment plants in Albemarle and Norwood. Combined they recorded approximately 105 million gallons of wastewater with an overall average of 287,911 gallons of wastewater per day in 2018.

SYSTEM PERFORMANCE FOR 2018

2018 Wastewater Treatment Plant Violations

Greater Badin Wastewater Treatment Plant

Month	Violation	Type
September	Yes	Flow
November	Yes	Flow
December	Yes	Flow

West Stanly Wastewater Treatment Plant

Month	Violation	Type
January	Yes	BOD/Flow
February	Yes	Flow
March	Yes	BOD
April	Yes	BOD/NH3/Flow
May	Yes	BOD/Fecal/Flow
June	Yes	Fecal
August	Yes	Flow
September	Yes	Fecal/Flow
November	Yes	Flow
December	Yes	Flow

The rated capacity of the Badin treatment plant is 550,000 gallons per day and the rated capacity of the West Stanly treatment plant is 900,000 gallons per day. A flow violation means the plant treated more wastewater than the rated capacity. This happens when heavy rains cause the system to take on rainwater. The plant can and does provide effective treatment at levels higher than the rated capacity. However, any numbers above the plant rating constitute a flow violation.

**This description is not a standard for all treatment plants, but the principle is similar.*

2018 Sewer Overflows/Spills/Bypasses

Location	Date	Amount
McCoy FM	1/09/18	40,000 gallons
McCoy PS	4/27/18	300,000 gallons
McCoy PS	4/28/18	250,000 gallons
Badin WWTP	7/07/18	21,000 gallons
Badin WWTP	8/03/18	12,600 gallons
Deese St PS	8/03/18	1,000 gallons
West Badin PS	8/03/18	6,500 gallons
Badin WWTP	9/17/18	39,600 gallons
Badin WWTP	10/11/18	20,000 gallons
West Badin PS	10/11/18	20,700 gallons
McCoy LS	10/11/18	150,000 gallons
Badin WWTP	11/05/18	10,800 gallons
Badin WWTP	11/15/18	13,500 gallons
West Badin LS	11/15/18	10,800 gallons
McCoy LS	12/03/18	1,500 gallons
Badin WWTP	12/28/18	19,350 gallons
West Badin LS	12/28/18	11,700 gallons

A sewer overflow or spill is indicated when untreated or partially treated wastewater is released from a pipe break or a manhole overflow. Overflows can result from pipes clogged with grease, tree roots, debris, damaged pipes or excessive inflow and infiltration of other water into the collection pipes.

In all our cases, rain water from heavy storms has entered the wastewater collection system to increase the flow beyond the rated capacity of the treatment plant or the collections system.

Wastewater spills can be harmful to the environment due to the potential for exposure to bacteria and other hazards. Each spill site is cleaned and treated to minimize the risk to the public.

The Airport Road Corridor Sanitary Sewer Improvements Project began construction August 2017 and was completed July 2018. It's designed to alleviate problems with a limited capacity sewer system. Stanly County secured grant and loan funds for this project.

In 2015, Stanly County was awarded 2.6 million dollars in loan funds to rehabilitate the West Stanly WWTP and the McCoy's Creek pump station. The project should begin construction in 2019.
